

MVC and Object Relational Mapping (ORM)

Web Development Boot Camp
Lesson 13.1

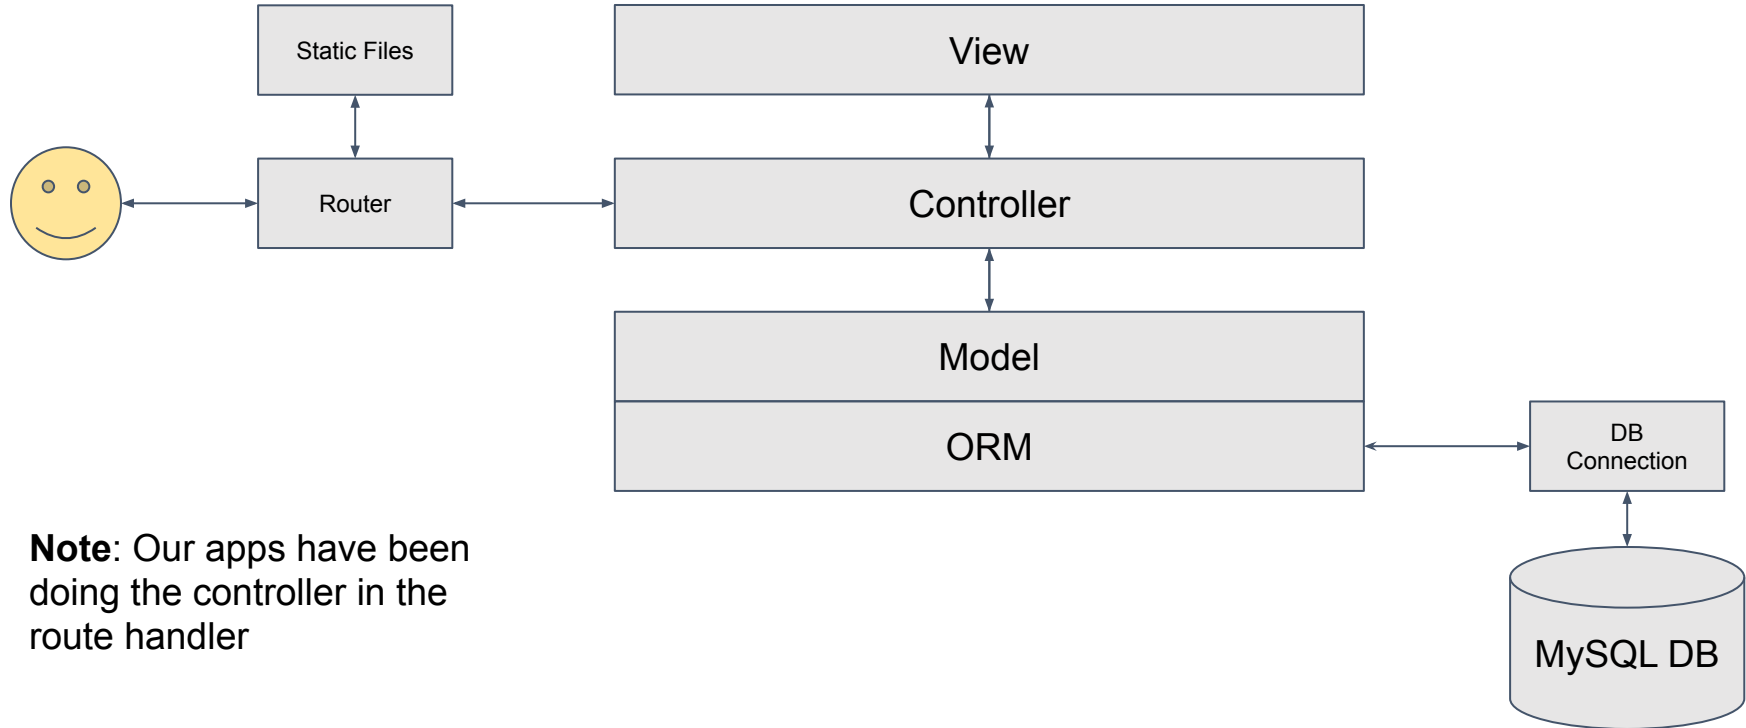

Object Relational Mapping (ORM)

A CRUD layer that works with all of your tables

- ***Problem:***
We need to implement CRUD for each table
- ***Observation:***
The CRUD code for each table is pretty similar, just different table and filed names
- ***Solution:***
Create an object with methods that can adapt to do CRUD for all of the tables

ORM is another application layer in MVC

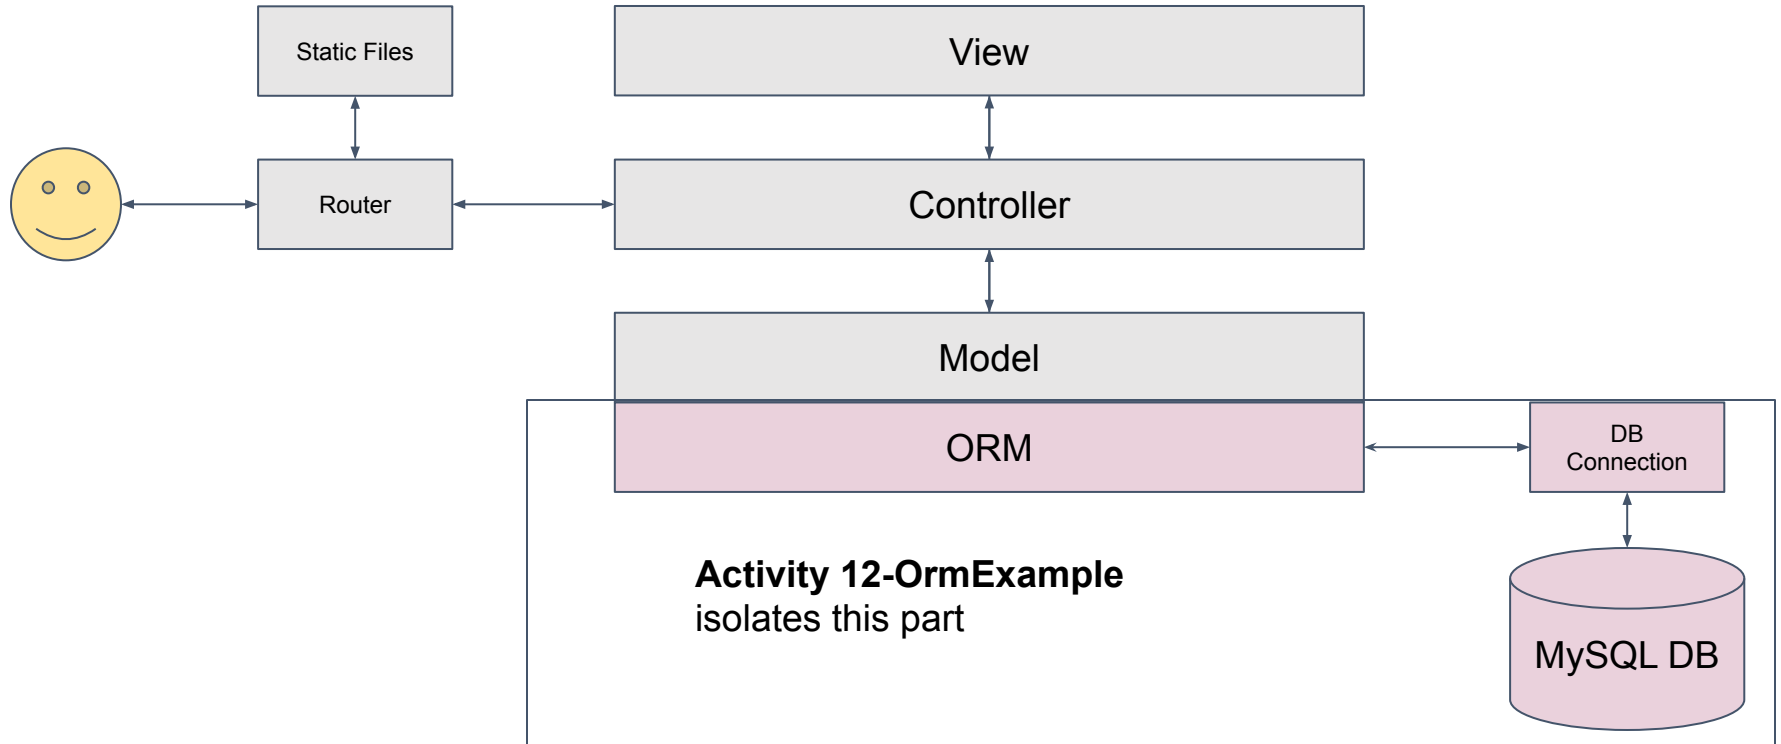

Our application is in layers, creating a *stack*

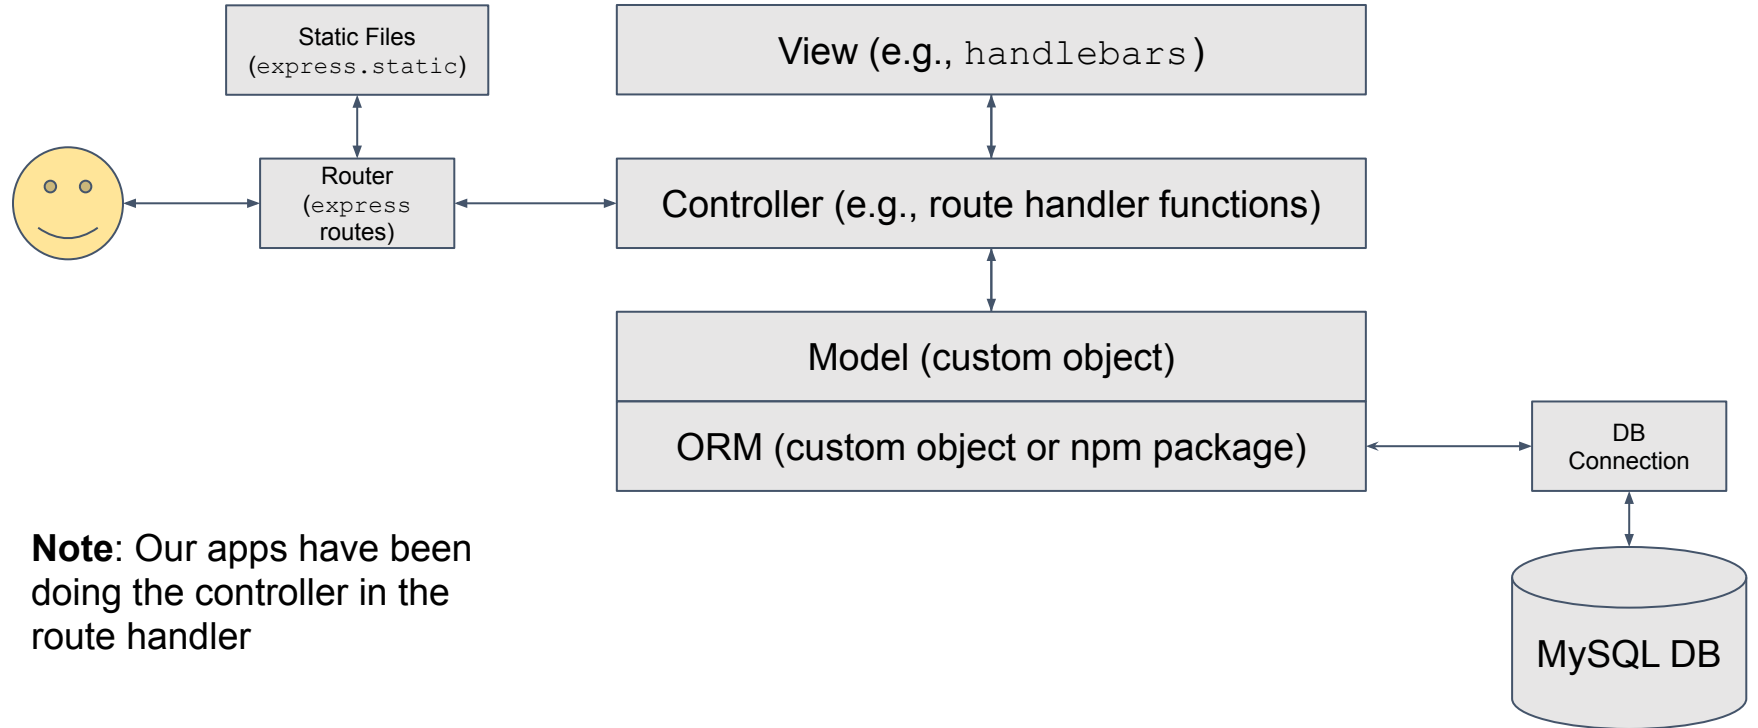

Note: Our apps have been doing the controller in the route handler
