Web Development Boot Camp  
Lesson 1.3

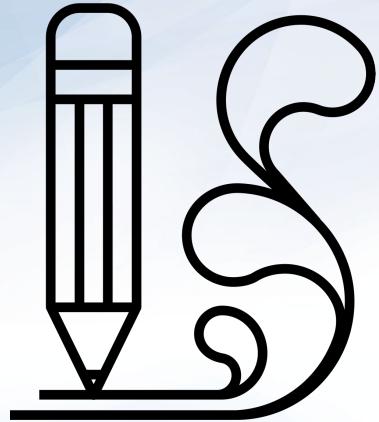

# Admin Items

# Admin items

---

- Weekend: 40 minute lunch or 15 minute break?
- Prework: turn it what you have. If you want to continue working through it, you can.

# Homework Assignment: **Code Refactor**

Due Date:  
Tuesday September 8

# Homework Assignment Tips

---

01

This assignment is an introduction to reading and editing code. Your job is to research what it means to make HTML accessible. Use semantic tags, alt attributes.

02

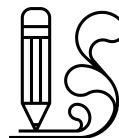

Review in-class material, especially activities.

03

Work with your peers! It's much better than screaming at your computer alone.

04

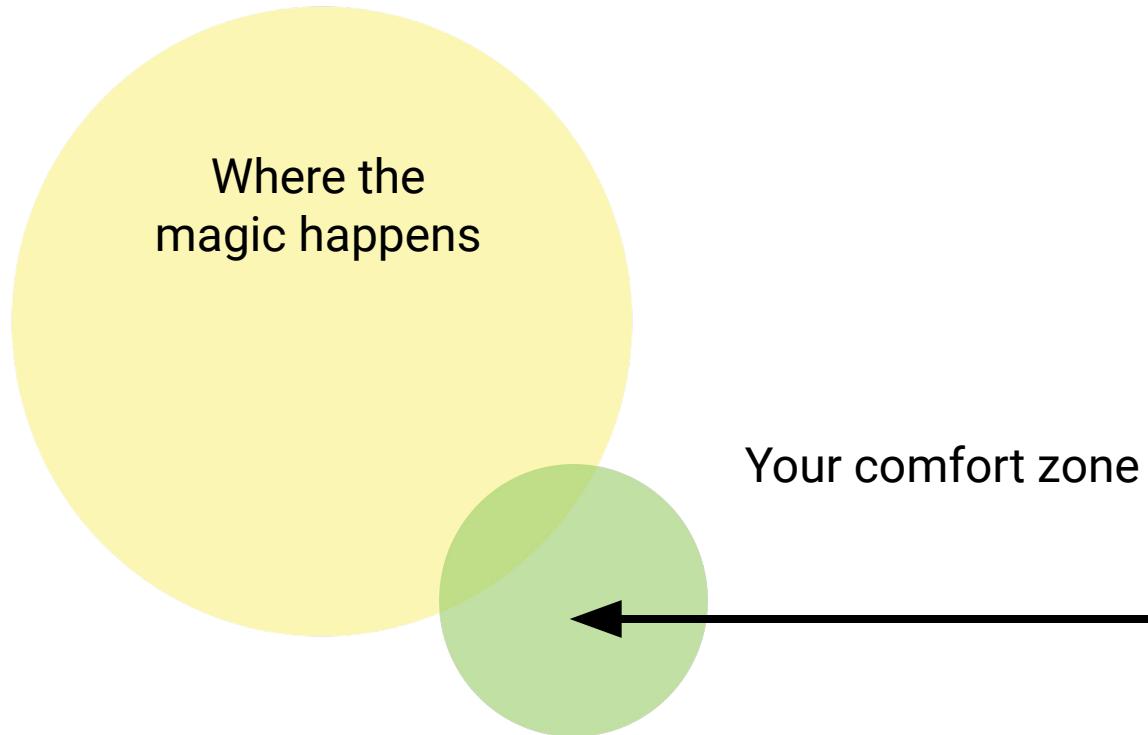

Ask questions on Slack! Your peers, TAs, and instructors are all here to help.

# Most Important of All

---

Just submit *something* (even if it seems pretty crummy)!

# Warning!

# Brace Yourselves

---

Today is going to be a bit tough. But trust us—it will all look easy a few weeks from now!

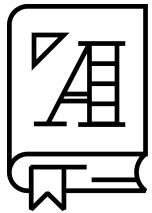

Don't expect to understand everything at once. Today is all about getting immersed.

# CSS Stylin'

# HTML and CSS Definitions

---

**HTML:** Hypertext Markup Language (Content)

**CSS:** Cascading Style Sheets (Appearance)

**HTML/CSS are the “languages of the web.”** Together they define both the content and the aesthetics of a webpage, handling everything from the layouts, colors, fonts, and content placement. (JavaScript is the language that deals with logic, animation, etc.)

# HTML/CSS Analogy

---

HTML Alone	HTML and CSS
Like writing papers in Notepad.	Like writing papers in Microsoft Word.
Used to write unformatted text (i.e, content only).	Used both to write the content <i>and</i> format it (color, font, alignment, layout, etc.).
	

# Basic HTML Page

---

```
<!DOCTYPE html>
<html lang="en">

    <head>
        <meta charset="UTF-8">
        <title>My First Website!</title>
    </head>

    <body>

CSS *decorates* HTML

# CSS and HTML terminology

---

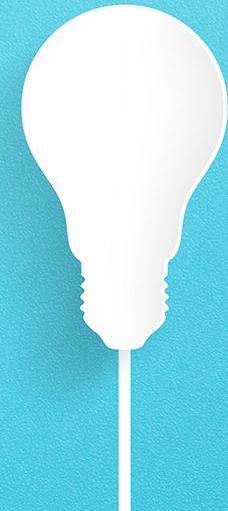

1. CSS identifies an element or set of elements to style using a **selector**
2. CSS then can apply a set of **styles** to that selector
3. Those styles utilize css **attributes** to change the look, size and position of elements

# Critical Concepts: What is a selector?

What is an element?

What is a class?

What is an id?

# HTML Syntax (Review)

---

What is an HTML element?

Open tag + content + closing tag = **HTML Element**

# HTML Syntax - Add a class

---

## What is a class?

class is an attribute on an element

1. You can have more than one class.
2. You can apply a class to more than one element

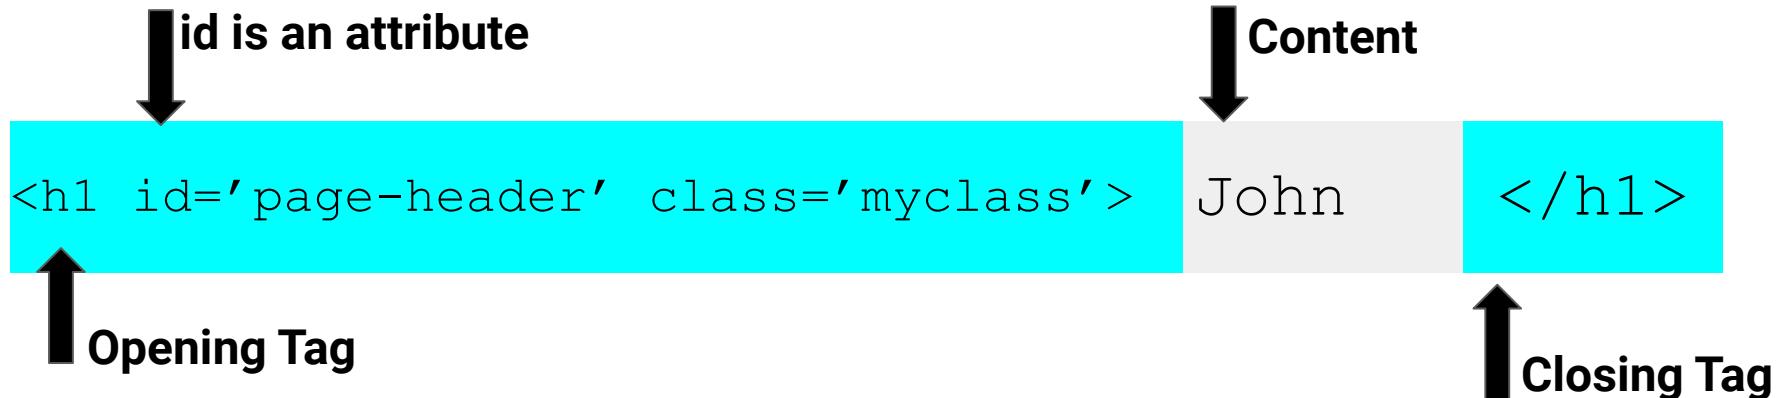

# HTML Syntax - Add an id

---

## What is an class?

**id** is also an attribute on an element

1. You can have only one id.
2. An id to identifies one element

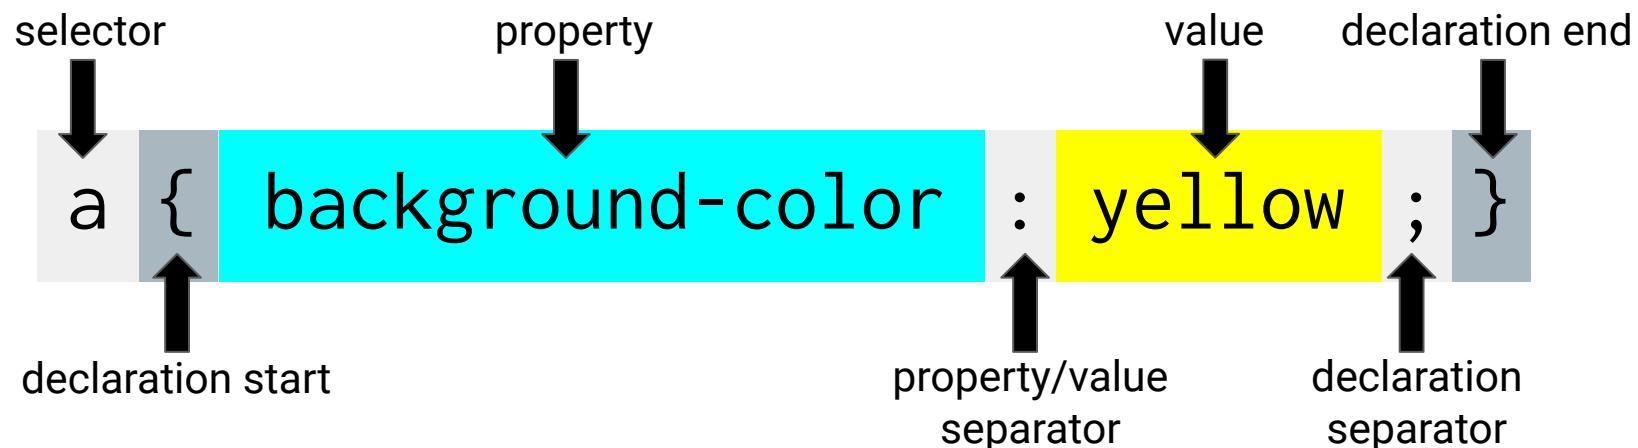

# CSS Syntax

---

CSS works by hooking onto **selectors** added into HTML using **classes** and **identifiers**.

Classes use **.classname**, IDs use **#idname**, and elements use just their name.

Once hooked, we apply **styles** to those HTML elements using CSS.

# Selectors

---

<b>Element selector</b>	Element name (p, a, div, span, etc.)	<b>Applies to all &lt;p&gt; elements</b>  <pre>p {     background-color: blue; }</pre>
<b>Class selector</b>	Period (.) + variable name (.myDiv, .phoneNumber, etc.)	<b>Applies to all elements with class="classItem"</b>  <pre>.classItem {     background-color: orange; }</pre>
<b>ID selector</b>	Hash (#) + variable name (#myDiv, #phoneNumber)	<b>Applies to all elements with id="idItem"</b>  <pre>#idItem {     background-color: green; }</pre>

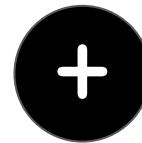

# CSS Selectors

---

```
p {  
    background-color: blue;  
}
```

```
.classItem {  
    background-color: orange;  
}
```

```
#idItem {  
    background-color: green;  
}
```

```
<p>  
    A paragraph with a blue background.  
</p>
```

```
<div class="classItem">  
    A div with an orange background.  
</div>
```

```
<div id="idItem">  
    A div with a green background.  
</div>
```

A paragraph with a blue background.

A div with an orange background.

A div with a green background.

# Key CSS Attributes

---

Font and Color:	
color:	sets color of text
font-size:	sets size of the font
font-style:	sets italics
font-weight:	sets bold
Alignment and Spacing:	
padding (top/right/bottom/left):	adds space between element and its own border
margin (top/right/bottom/left):	adds space between element and surrounding elements
float:	forces elements to the sides, centers, or tops
Background:	
background-color:	sets background color
background-image:	sets background image

## **Powerful Duo**

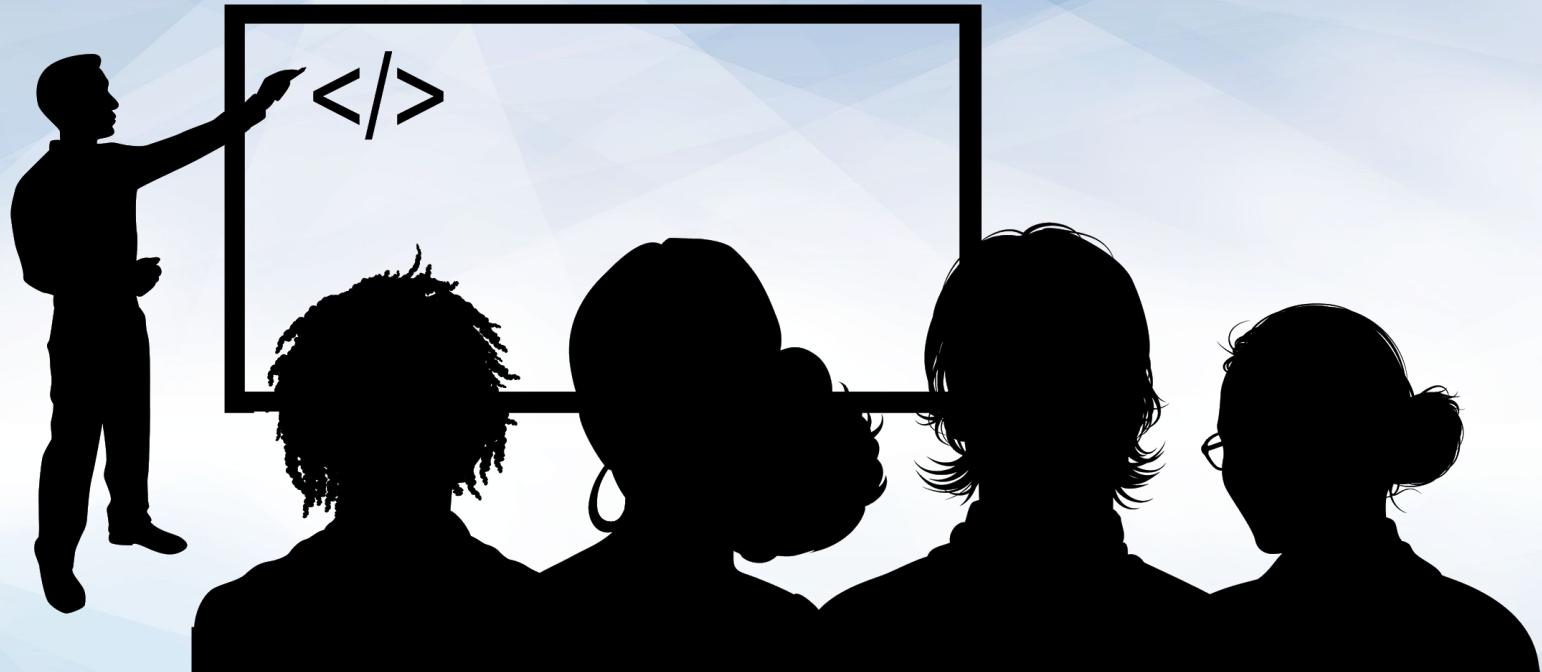

Believe it or not, HTML and CSS are all you need to develop a vivid, full-blown website.

# Where to do I write CSS?

---

## Apply CSS in three places

1. In the HTML <head> in a <style> tag
2. In a .css file which is linked to in the HTML head
3. Inline on an element as a style attribute

## Instructor Demonstration CSS Basics

# Activity: CSS-Styled Bio Page

In this activity, you'll upgrade your previous HTML bio page using CSS style rules. Once you're done, commit and push your changes to GitHub.

**(Additional instructions will be sent via Slack)**

Suggested Time:  
20 minutes

# Activity: CSS-Styled Bio Page

---

## Student Bio

# Questions?

# Relative File Paths

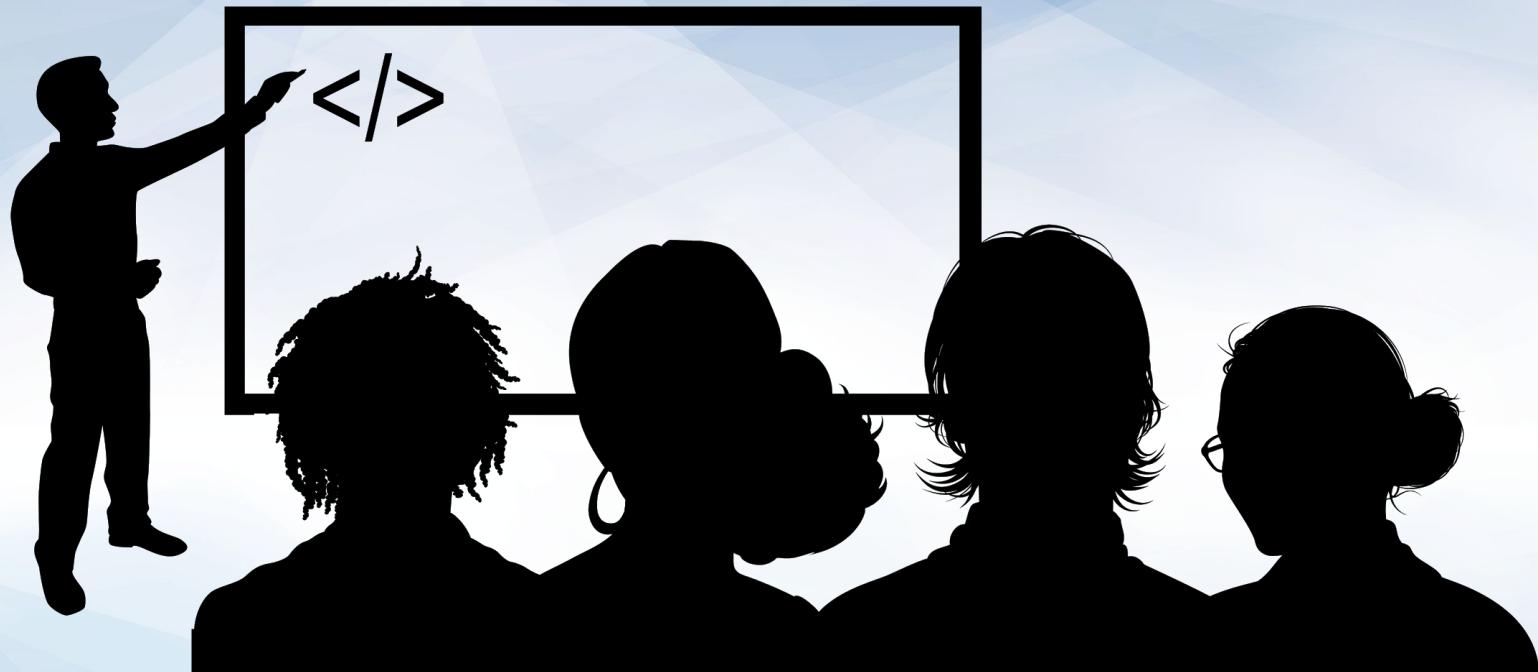

# Relative File Paths

**Relative file paths** connect us with other files in our working directory.  
In this case, style.css is in the same folder as our HTML document.

The screenshot shows a Windows File Explorer window titled "RelativePaths\_WorkingExample". The address bar indicates the path: "1.3 > Activities > 1-RelativePaths > RelativePaths > RelativePaths\_WorkingExample". The main pane displays two files: "HTML-Bio-withCSS" (Chrome HTML Document) and "style.css" (CSS File). The "style.css" file is highlighted with a blue selection bar. The toolbar at the top includes standard file operations like Pin to Quick access, Copy, Paste, Cut, Copy path, Paste shortcut, Move to, Copy to, Delete, Rename, New folder, New item, Properties, Open, Select all, Select none, Edit, History, and Invert selection.

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4     <title>1.2.9 Exercise</title>
5
6     <!-- This critical Line points your HTML to the CSS file. Notice the "relative" pathway --&gt;
7     &lt;link rel="stylesheet" type="text/css" href="style.css"&gt;
8 &lt;/head&gt;
9 &lt;body&gt;</pre>
```

## Instructor Demonstration Relative File Paths

# Absolutely No Absolute Paths

---

Always use relative file paths!

If you deploy websites without them, **all of your links will fail.**

The same will happen if you move your project from one folder to another.

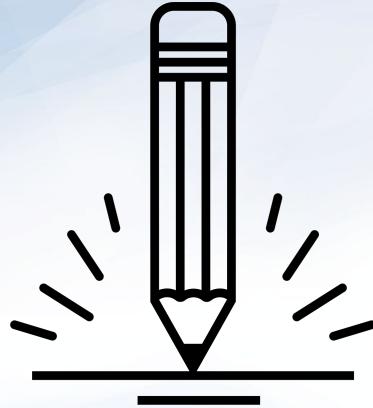

Remember, there is no such thing as a C: drive on the internet.

**VERY, VERY BAD**

```
<!-- BAD!!!! -->  
<link rel="stylesheet" href="D:/trilogy/FullStack-Lesson-Plans/02-lesson-plans/01-  
html-css-three-days/1-Class-Content/1.3/Activities/1-RelativePaths/RelativePaths/  
RelativePaths_WorkingExample/style.css">
```

## Activity:

### Relative File Paths

Suggested Time:  
10 minutes

# Activity: Relative File Paths

---

01

Unzip the folder sent to you via Slack.

02

Edit the HTML files in all of the `RelativePaths` folders. Write relative paths that link the HTML documents with CSS stylesheets.

**HINT:** Check out the `RelativePaths_WorkingExample` folder.

Suggested Time: 10 Minutes

# Box Model

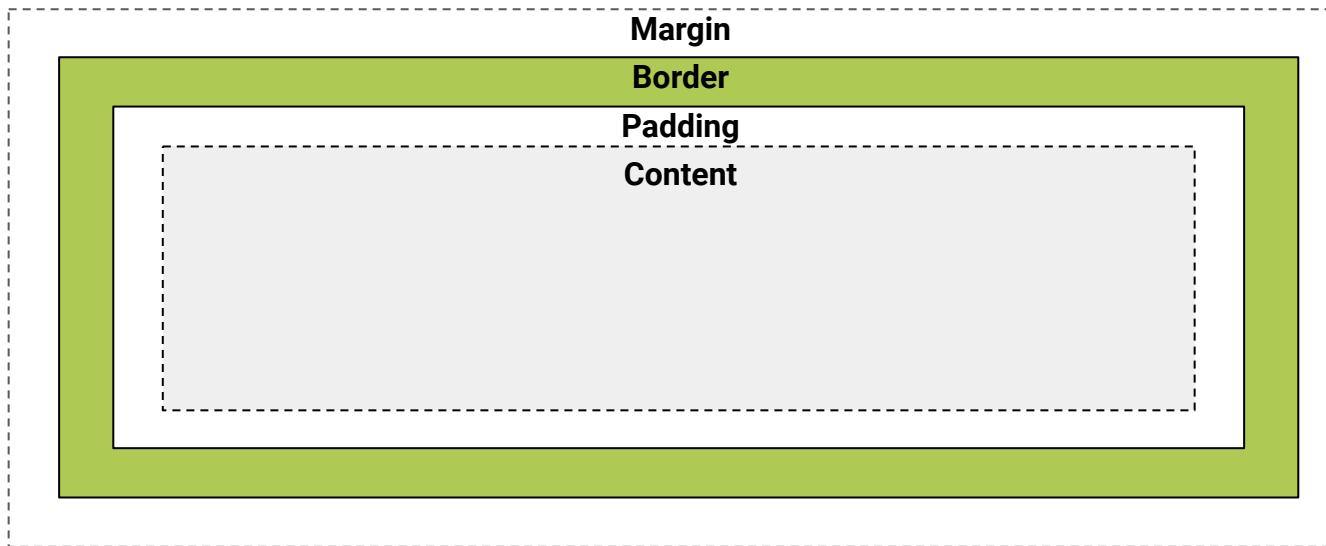

# Boxes Upon Boxes

---

In CSS, every element rests within a series of boxes.

**Each box has customizable space properties:** margin, border, and padding

**Typical spacing value:** 20px 10px 10px 20px (top, right, bottom, left)

# Activity: Box Model

---

```
#box {  
  
background-color: #1E5792;  
width: 400px;  
height: 440px;  
margin: 10px 30px 20px 50px;  
color: #fff;  
padding: 25px 10px 30px 20px;  
border-style: solid;  
border-width: 22px;  
border-color: #113152;  
  
}
```

How wide is the blue #box?

How tall is the blue #box?

**Total element width** = content width + left padding + right padding + left border + right border + left margin + right margin

**Total element height** = content height + top padding + bottom padding + top border + bottom border + top margin + bottom margin

Suggested Time: 10 Minutes

# Activity: Boxes Upon Boxes

## Answer:

Width: 474 px (no margin), 554 px (with margin)

Height: 539 px (no margin), 569 px (with margin)

```
#box {  
  
background-color: #1E5792;  
width: 400px;  
height: 440px;  
margin: 10px 30px 20px 50px;  
color: #fff;  
padding: 25px 10px 30px 20px;  
border-style: solid;  
border-width: 22px;  
border-color: #113152;  
  
}
```

How wide is the blue #box?

How tall is the blue #box?

**Total element width** = content width + left padding + right padding + left border + right border + left margin + right margin

**Total element height** = content height + top padding + bottom padding + top border + bottom border + top margin + bottom margin

Suggested Time: 10 Minutes

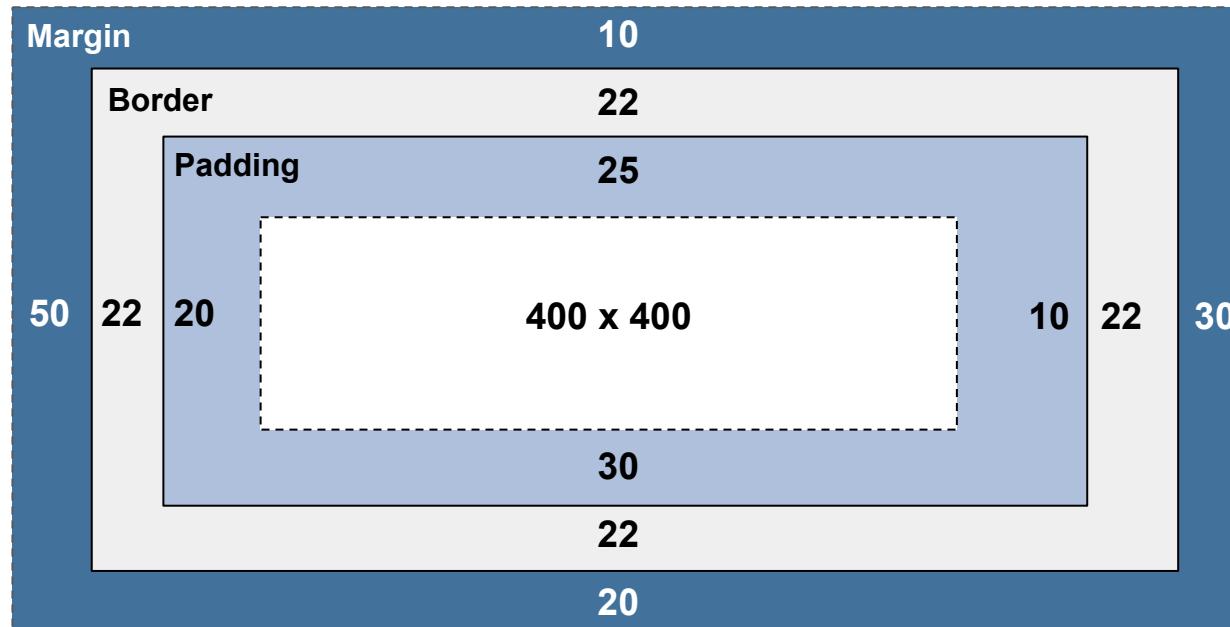

# Activity: Box Model

## Answer:

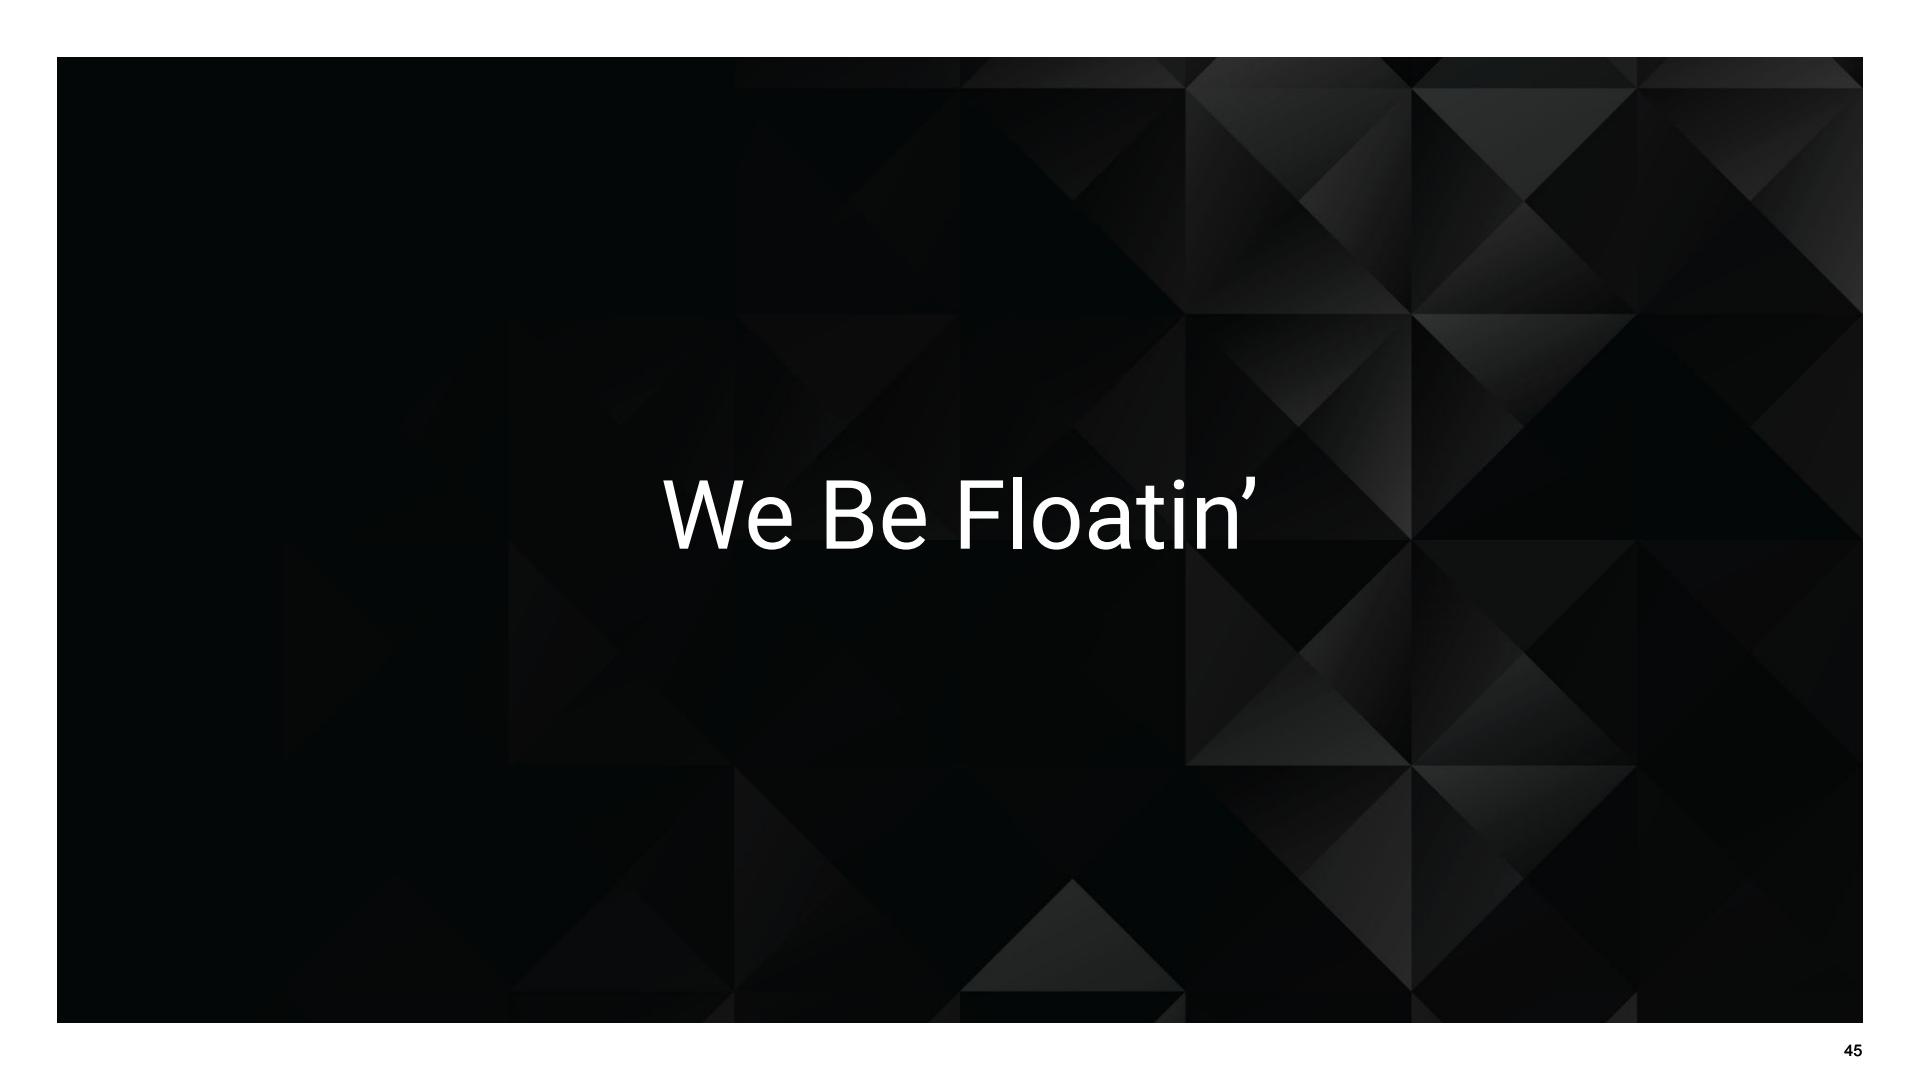

Width: 474 px (no margin), 554 px (with margin)

Height: 539 px (no margin), 569 px (with margin)

Suggested Time: 10 Minutes

We Be Floatin'

## Warning

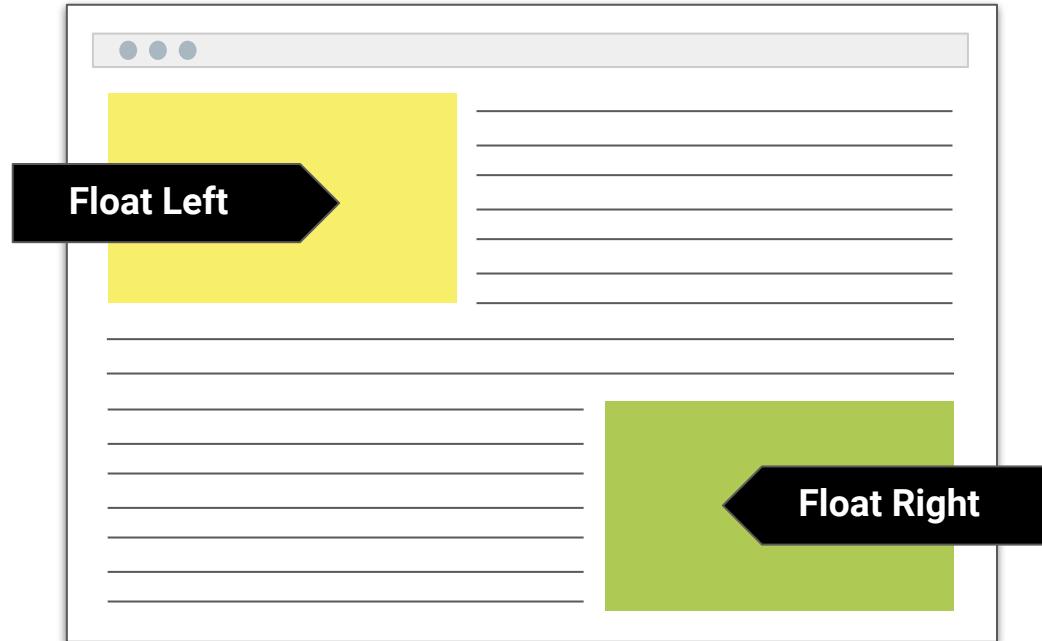

The next few topics are fairly tricky but also *very important*. Time to channel that inner genius!

# The Concept of Flow

---

By default, every HTML element displayed in the browser is governed by a concept called **flow**.

This means that HTML elements force adjacent elements to flow around them.

# Analogy: Flow and MS Word

---

The concept of flow is similar to wrap-text in Microsoft Word.

Just as in MS Word, with CSS you can position images to be in-line with text, on top of text, and so on.

# Block Elements

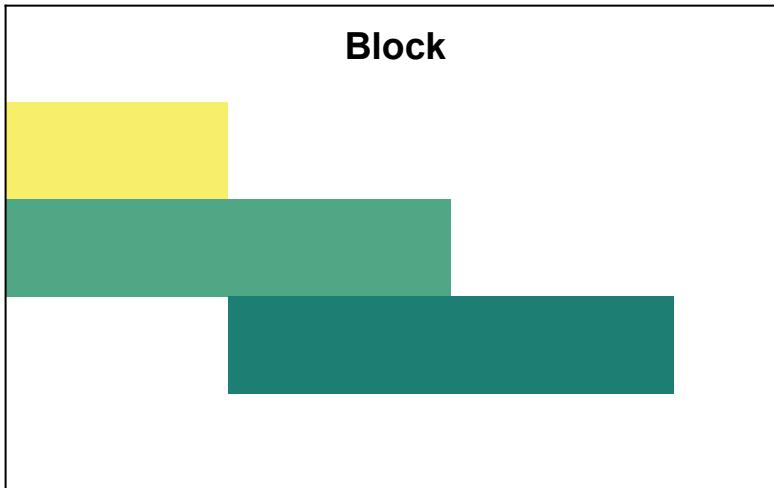

---

By default, web clients render many HTML elements as **block elements**. Paragraphs, headers, divs, and more receive this treatment.

A block element will take up an entire line of space—unless you intervene with CSS properties.

# Block Elements vs. In-line Elements

---

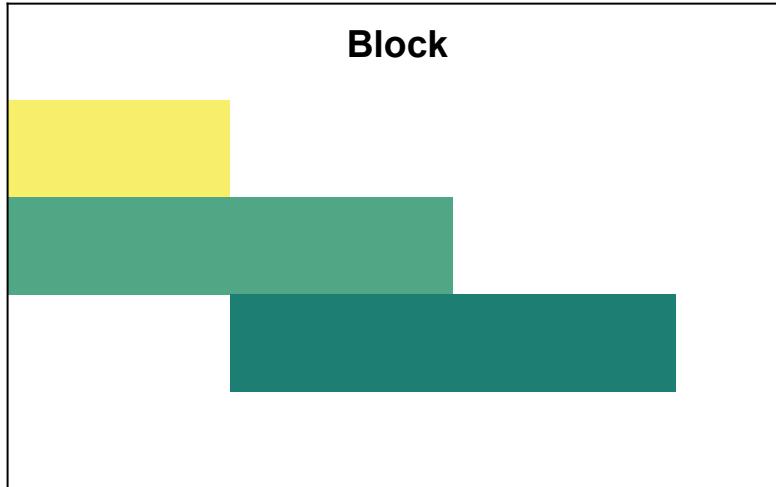

Now, contrast block elements with **in-line elements**.

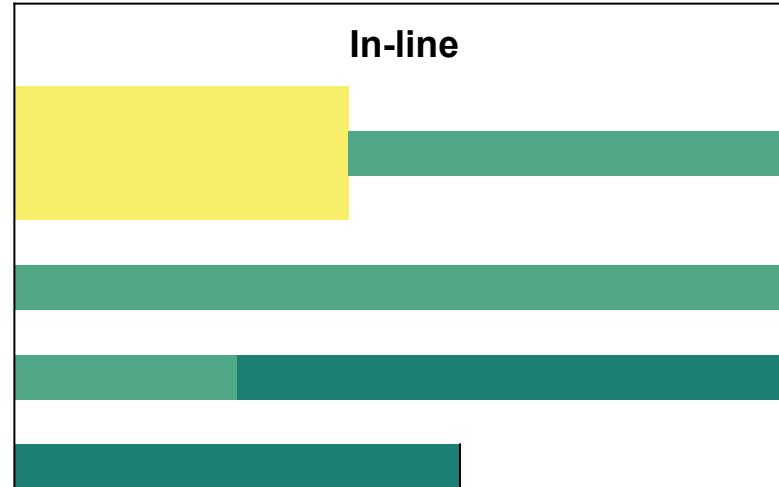

By using **float CSS properties**, we can command our website to display multiple HTML elements adjacently.

**Block**

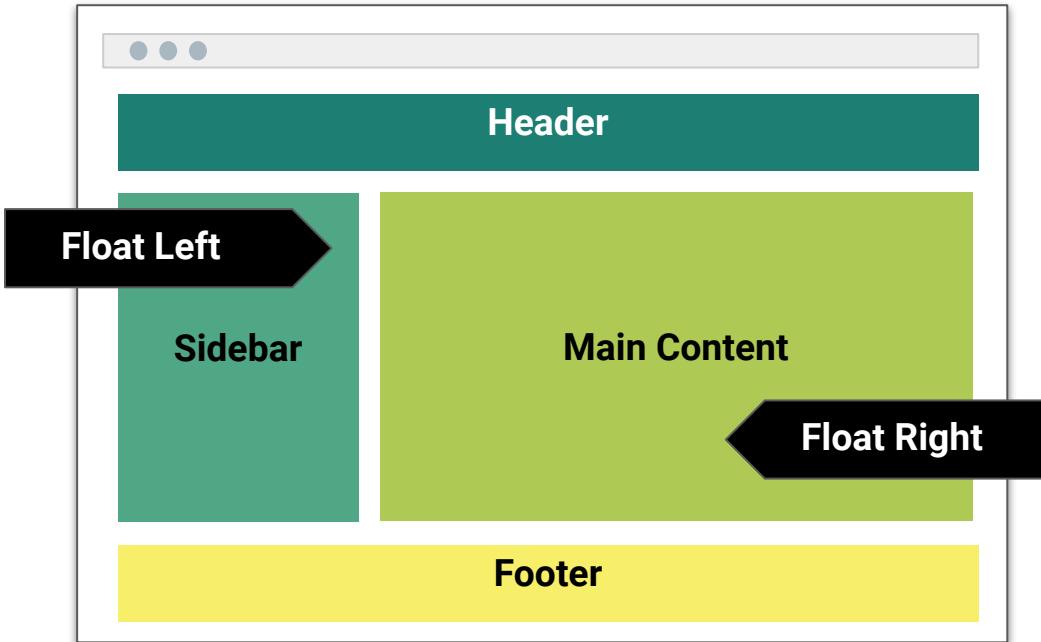

**In-line**

# Floats

---

To transform these block elements into in-line elements, we use a CSS property called **float**. Floats are necessary when building web layouts.

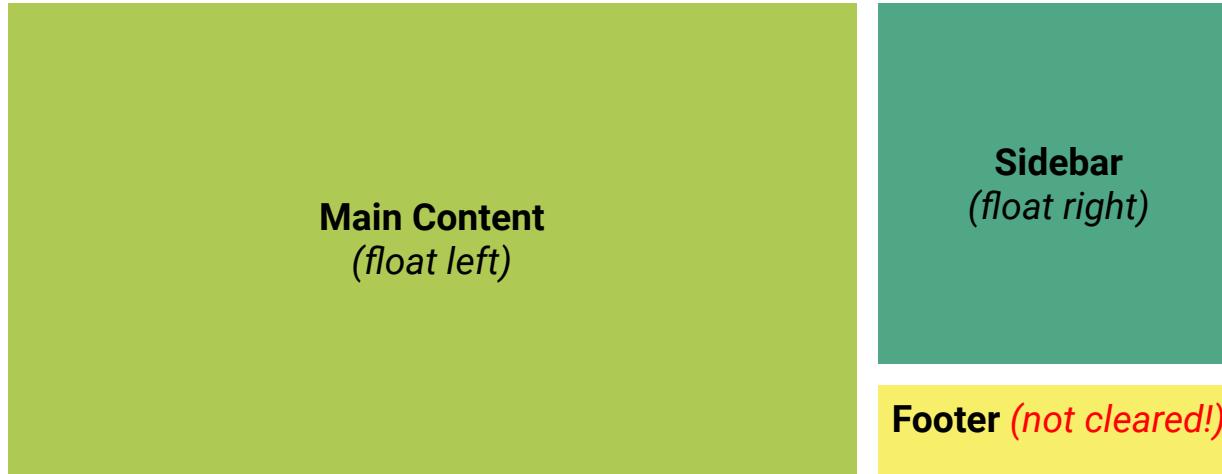

## CSS

```
#sidebar {  
    float: left;  
}  
  
#main-content {  
    float: right;  
}
```

# Clearing the Float

---

However, floats often get in the way of layouts. Sometimes we don't want to give each element the “in-line” treatment.

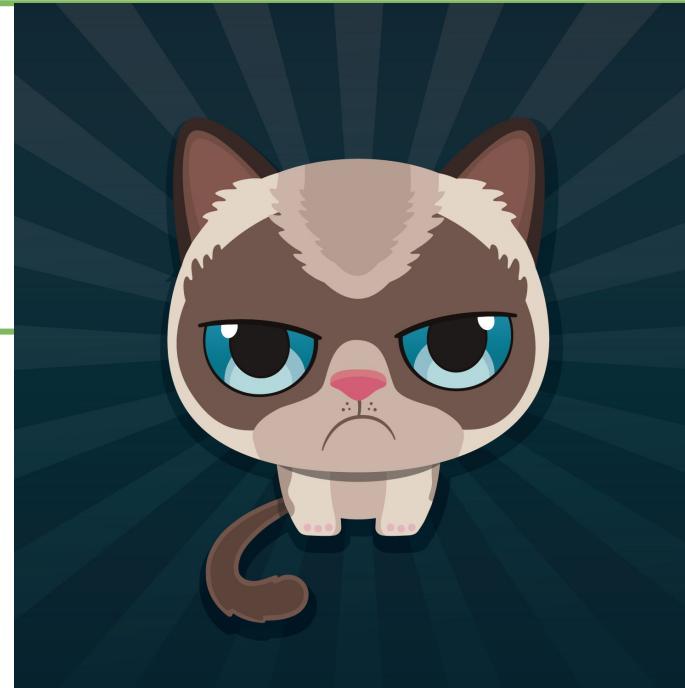

# clearfix Hack

---

Sometimes when elements don't match up in size, we get situations like this:

<div>

Uh-oh! The image is taller than the element containing it, and it's floated, so it's overflowing outside of its container!

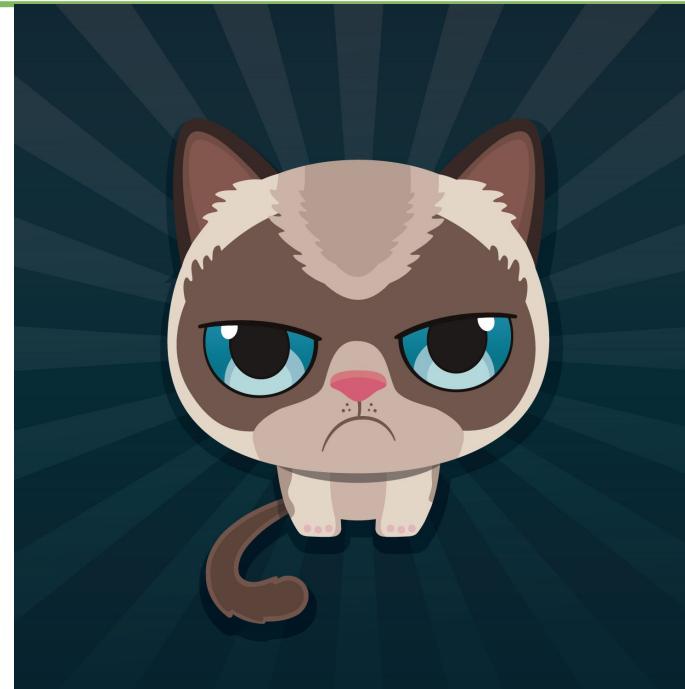

# clearfix Hack

---

We can get around this by using the **clearfix hack**.

```
<div class="clearfix">
```

Much better!

# clearfix Hack

---

`::after` is what we call a pseudo-element. We use it to style specific parts of an element.

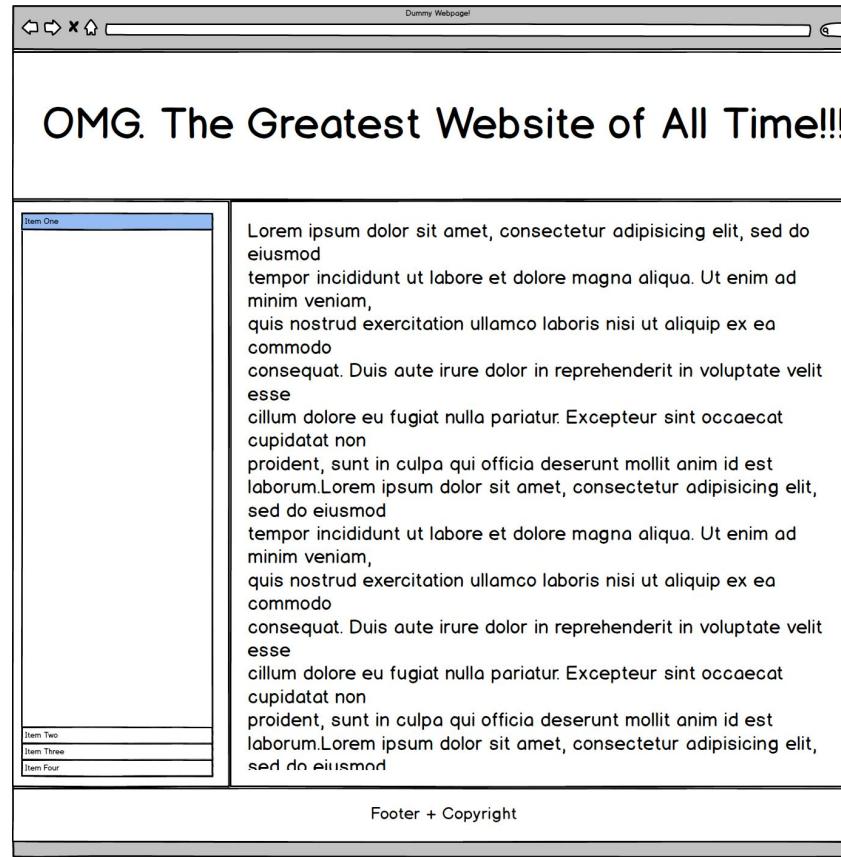

This will add an HTML element, hidden from view, after the content of the `.clearfix` element.  
This clears the float.

```
.clearfix::after {  
    content: "";  
    display: block;  
    clear: both;  
}
```

Instructor Demonstration  
Floats

# A Fantastic Guide to Floats

To all serious frontend developers, this is a necessary read:  
[css-tricks.com](https://css-tricks.com)

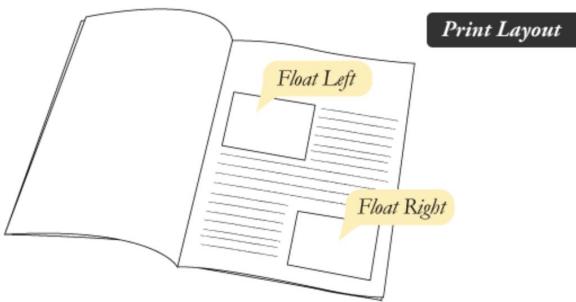

The screenshot shows the top navigation bar of the CSS-Tricks website, which includes links for Articles, Videos, Almanac, Snippets, Newsletter, Jobs, and Guides. Below the navigation, a section titled '# What is "Float"?' is visible. This section contains text explaining that 'Float' is a CSS positioning property used for text wrap around images. It includes a diagram of an open book with text blocks labeled 'Float Left' and 'Float Right'.

# What is "Float"?

Float is a CSS positioning property. To understand its purpose and origin, we can look to print design. In a print layout, images may be set into the page such that text wraps around them as needed. This is commonly and appropriately called "text wrap". Here is an example of that.

*Print Layout*

The diagram illustrates a printed page from an open book. The left page contains a single column of text. The right page contains two columns of text. A yellow speech bubble labeled 'Float Left' points to the first column of the right page. Another yellow speech bubble labeled 'Float Right' points to the second column of the right page. The entire diagram is labeled 'Print Layout' at the top.

# Activity:

## Float Layout

Suggested Time:  
30 minutes

# Activity: Float Layout

---

In this activity, you'll flex your newfound floating skills by creating a conceptual layout. Eyeball the design to your best ability.

Check Slack for additional instructions.

Suggested Time: 30 Minutes

[Floats in CSS](#)

# Take a Break!

---

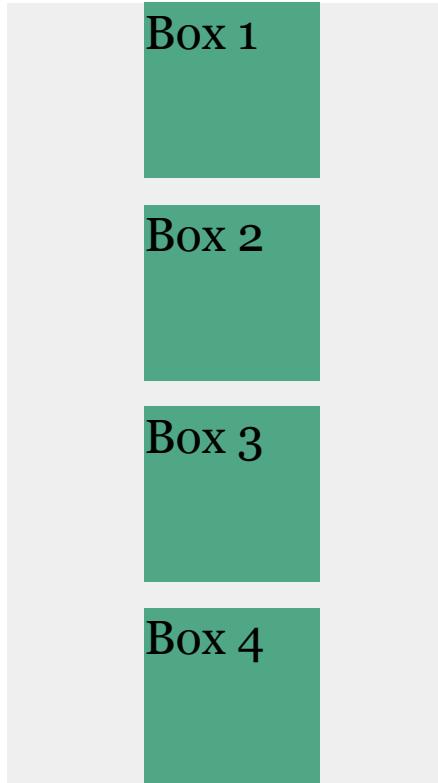

# CSS Positioning

# Position: Static (Default)

---

Four boxes placed statically (default):

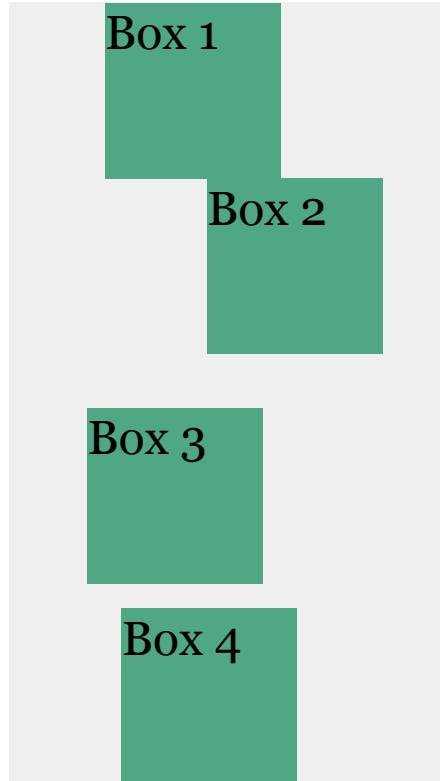

# Position: Relative

---

Switching the boxes to relative will nudge the boxes in relation to their “original” location.

```
.box {  
  background: #2db34a;  
  height: 80px;  
  position: relative;  
  width: 80px;  
}  
.box-1 {  
  top: 20px;  
}  
.box-2 {  
  left: 40px;  
}  
.box-3 {  
  bottom: -10px;  
  right: 20px;  
}
```

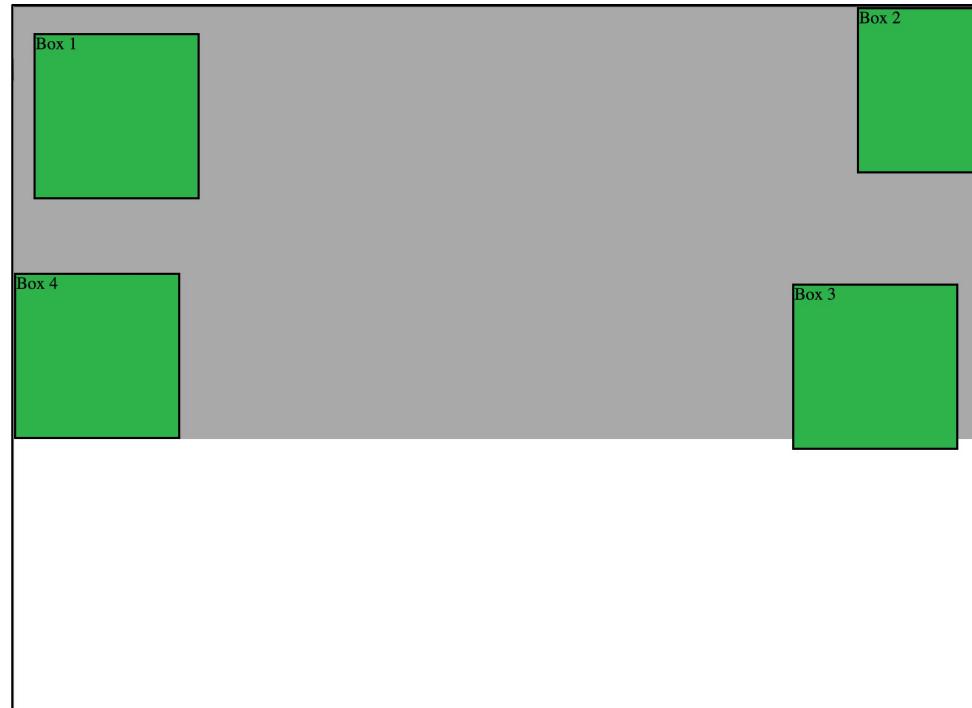

# Position: Absolute

---

Positioned relative to nearest positioned ancestor

```
.box-set {  
  height: 400px;  
  background: darkgray;  
  position: relative;  
}  
.box {  
  position: absolute;  
  height: 150px;  
  width: 150px;  
  background: #2db34a;  
  border: 2px solid black;  
}  
.box-1 {  
  top: 6%;  
  left: 2%;  
}  
.box-2 {  
  top: 0;  
  right: -40px;  
}  
.box-3 {  
  bottom: -10px;  
  right: 20px;  
}  
.box-4 {  
  bottom: 0;  
}
```

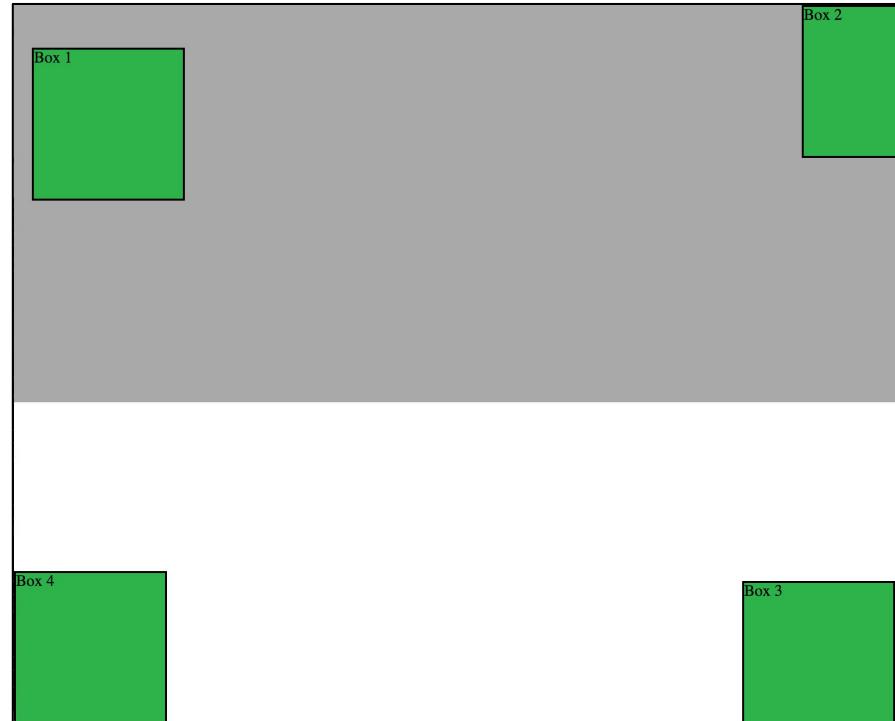

# Position: Fixed

---

Position with exact coordinates in the browser window

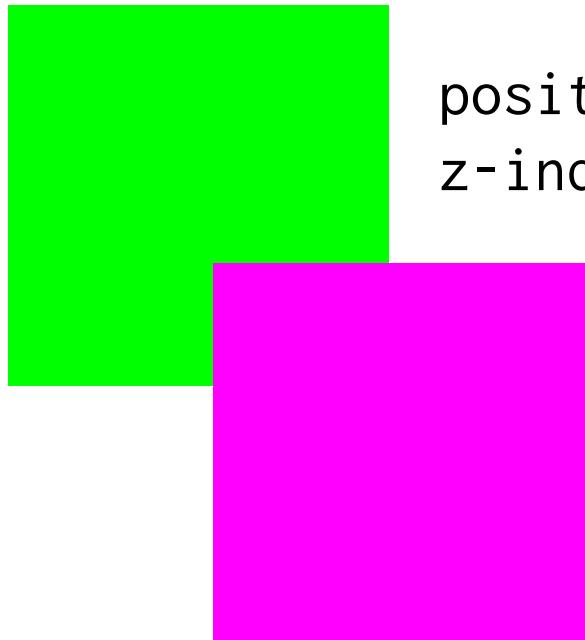

```
.box-set {  
  height: 400px;  
  background: darkgray;  
}  
.box {  
  position: fixed;  
  height: 150px;  
  width: 150px;  
  background: #2db34a;  
  border: 2px solid black;  
}  
.box-1 {  
  top: 6%;  
  left: 2%;  
}  
.box-2 {  
  top: 0;  
  right: -40px;  
}  
.box-3 {  
  bottom: -10px;  
  right: 20px;  
}  
.box-4 {  
  bottom: 0;  
}
```

# Layering with z-index

---

The z-index property allows you to layer elements on top of each other.

position: absolute;  
z-index:1;

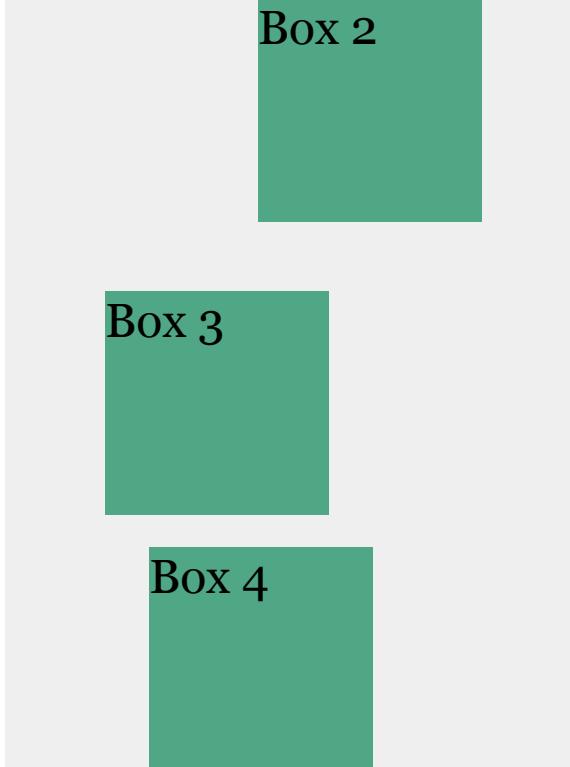

position: absolute;  
z-index:2;

# Hiding Things

---

Display: none allows you to hide elements from view.

This will become useful in later sections, when we'll hide and reveal specific HTML elements of our choosing.

Box 2

## Tips to Keep Moving Forward

01

**Redo this at home.**

We designed the class activities to firm up your HTML/CSS skills. Try them again at home.

02

**REMEMBER!**

The best way to learn web development is to practice, practice, practice!

# Chrome Inspector

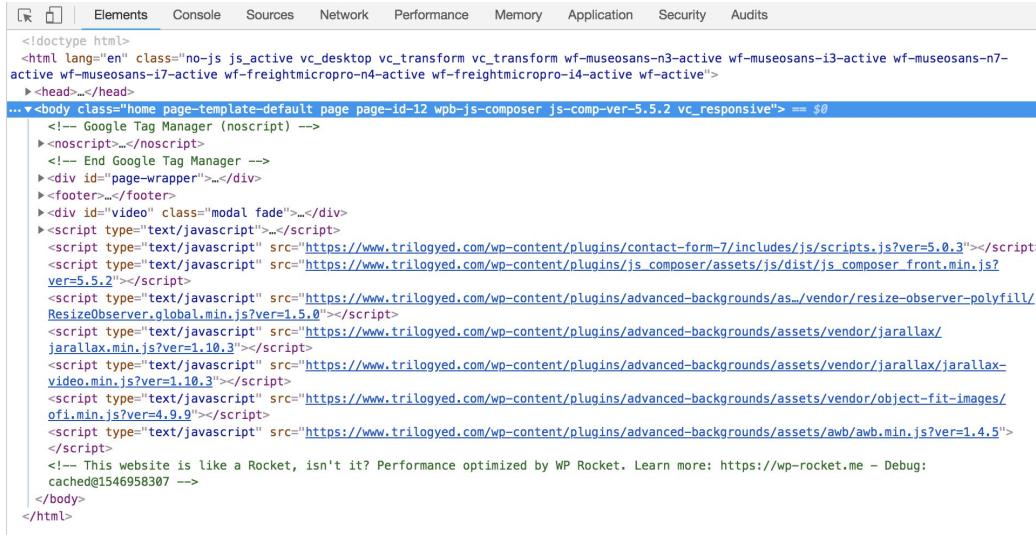

# Chrome Inspector Is Your Friend

To access the Chrome inspector, right-click on a page and select **Inspect**.

It lets you inspect the HTML, CSS, and more.

A screenshot of the Chrome DevTools interface, specifically the Elements tab. The tab bar at the top includes Elements, Console, Sources, Network, Performance, Memory, Application, Security, and Audits. The main area displays the HTML source code of a webpage. A blue selection bar highlights a portion of the code within the  tag, specifically the section containing script tags. The code shows various JavaScript files being loaded from a domain named 'trilogedyed.com' via HTTPS, including 'scripts.js', 'js\_composer\_front.min.js', and 'awb.awb.min.js'. The code also includes comments about performance optimization by WP Rocket.

```
<!doctype html>

          <script type="text/javascript" src="https://www.trilogedyed.com/wp-content/plugins/advanced-backgrounds/assets/vendor/jarallax/jarallax-video.min.js?ver=1.10.3"></script>
          <script type="text/javascript" src="https://www.trilogedyed.com/wp-content/plugins/advanced-backgrounds/assets/vendor/object-fit-images/ofi.min.js?ver=4.9.9"></script>
          <script type="text/javascript" src="https://www.trilogedyed.com/wp-content/plugins/advanced-backgrounds/assets/vendor/awb/awb.min.js?ver=1.4.5"></script>
        <!-- This website is like a Rocket, isn't it? Performance optimized by WP Rocket. Learn more: https://wp-rocket.me - Debug: cached@1546958307 -->
      </body>
    </html>
```

# Chrome Inspector Is Your Friend

You can even edit the HTML/CSS in a webpage and instantly view your changes in the browser!

This works on any website, whether it's yours or not.

The screenshot shows the Chrome DevTools Elements tab with the following details:

- HTML View:** Displays the full HTML code of the page, including scripts and styles. A portion of the code is highlighted in blue, indicating an active selection for modification.
- Styles Tab:** Shows the current CSS rules applied to the selected element. It includes a "Filter" bar set to ":hov .cls +". The rules are organized into sections:
  - `element.style {`: Contains vendor-specific font-smoothing rules.
  - `* {`: Contains vendor-specific box-sizing rules.
  - `script {`: Contains a user agent stylesheet rule for `display: none;`.
- Inherited From:** Lists the inheritance chain from the top-level `body` down to the specific element being inspected.

We'll come back to  
this in our next class.

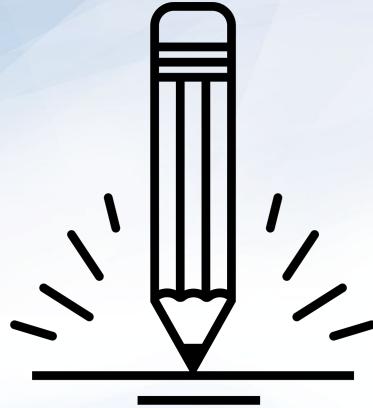

# Recap

# You Got This!

# Questions?

# **Extra Material**

# Activity: Chrome Inspector

Choose a website you commonly visit (Amazon, Google, Huff Po, etc.) and heavily modify it using Chrome DevTools.

Suggested Time:  
15 minutes

# Activity: Chrome Inspector

---

Using Chrome Inspector, try to modify the following:

Content (change text)

Colors

Spacing

Any other CSS style rules

When you're done, send a screenshot to your class's Slack channel.

Suggested Time: 15 minutes

# CSS Resets

# Loading Multiple CSS Files

---

We can link our documents to more than one stylesheet at a time—one of the most powerful features of CSS/HTML.

By tapping into different stylesheets simultaneously, we can create complex layouts with plenty of design rules.

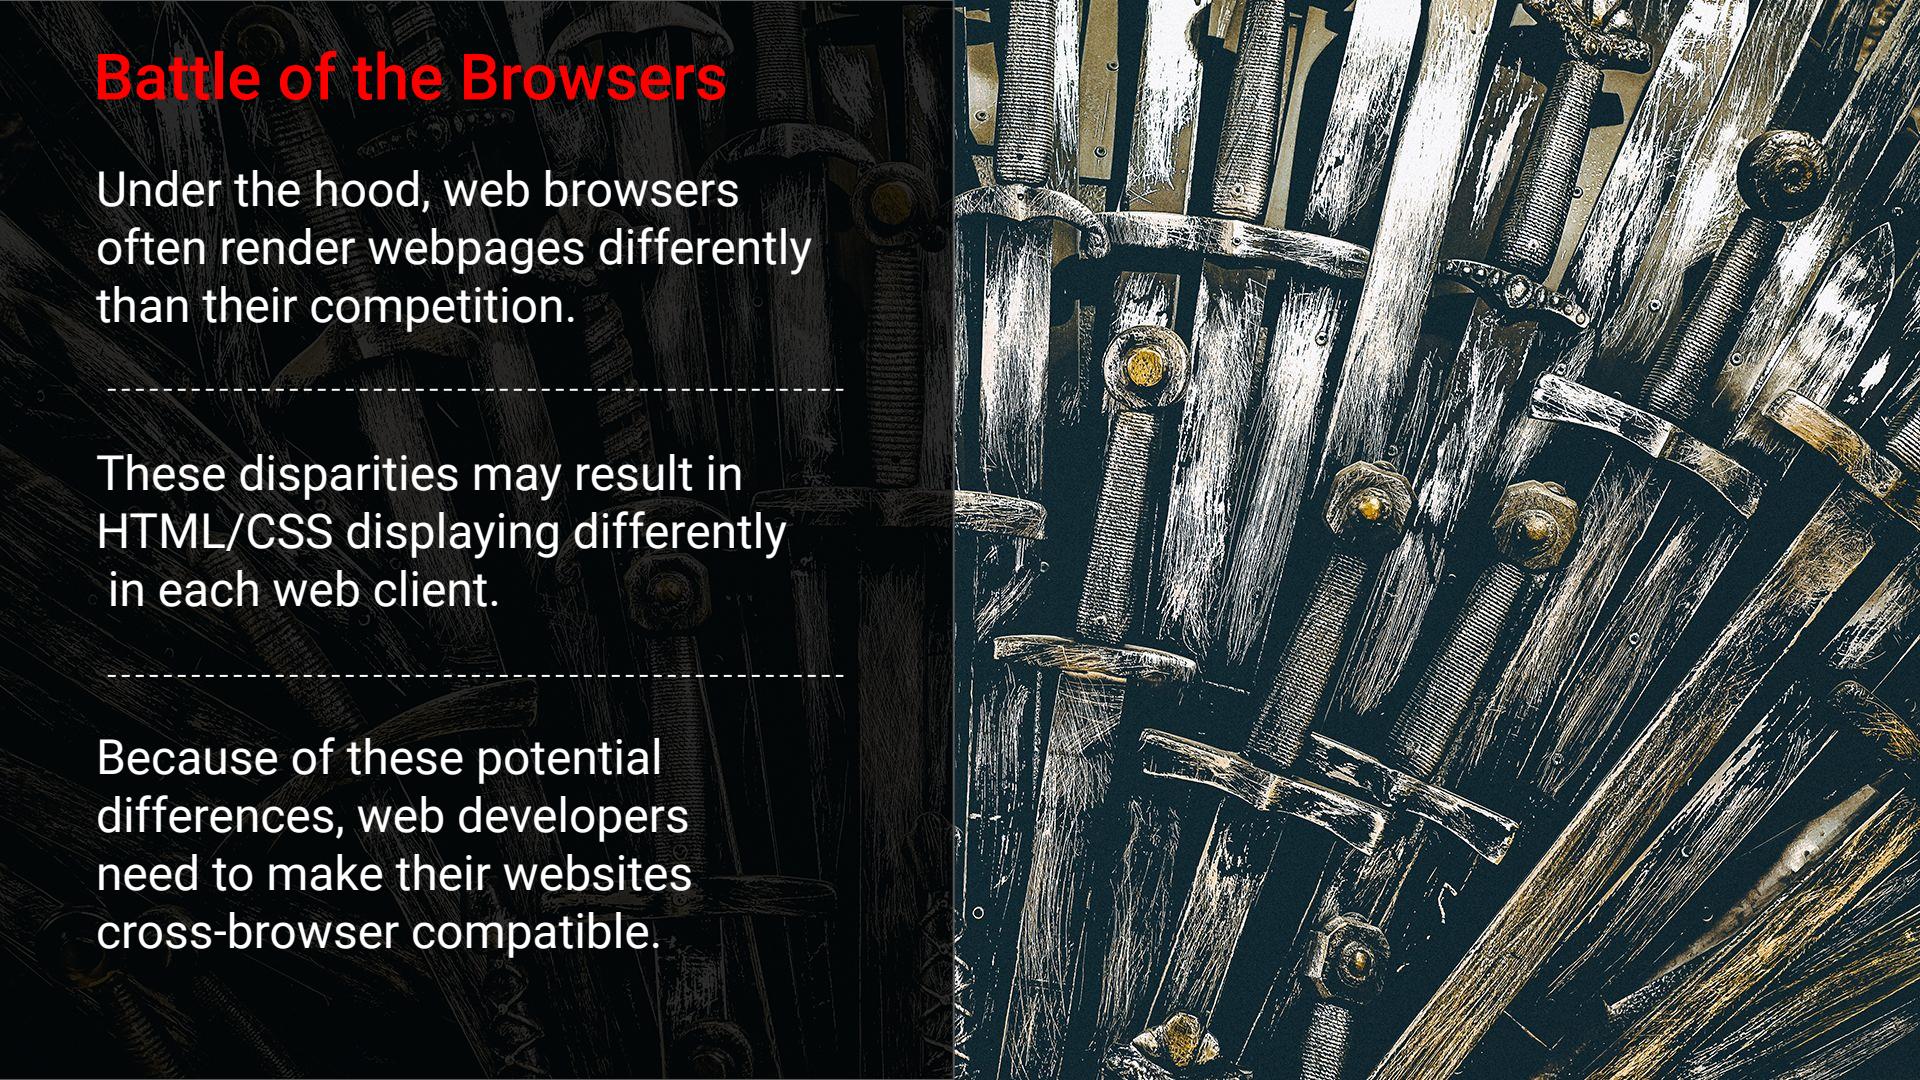

**Just remember:**  
the loading  
order matters!

```
<!DOCTYPE html>
<html>
<head>
    <title>Multiple CSS Files!!</title>
    <link rel="stylesheet" href="assets/style1.css">
    <link rel="stylesheet" href="assets/style2.css">
    <link rel="stylesheet" href="assets/style3.css">
</head>
<body>
    <header>
```

**By a show of hands...**  
**Which browser do you use?**

# Battle of the Browsers

Under the hood, web browsers often render webpages differently than their competition.

---

These disparities may result in HTML/CSS displaying differently in each web client.

---

Because of these potential differences, web developers need to make their websites cross-browser compatible.

# Reset.css (or Normalize.css)

Reset.css will “reset” all browser-specific CSS. This means your site will appear the same in all browsers.

However, you will have to restyle everything yourself.

Header 1

# Why CSS Resets Matter

---

01

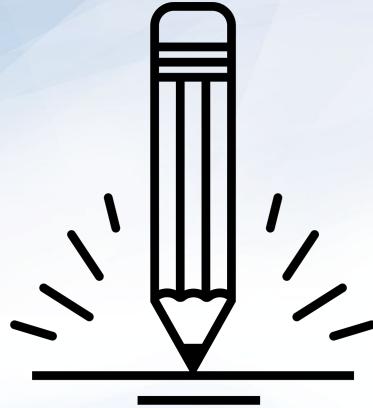

They help create browser-compatible websites.

02

They are an example of using someone else's CSS in *your* website!

03

They are a common topic in front-end developer interviews.

## Activity: Reset.css

Incorporate a reset.css file in a basic HTML file. (Instructions sent out)

Note how the reset file impacts the styling of your HTML file.

Suggested Time:  
10 minutes
